Work Experience

Flutter Developer @TiQuest (Luxembourg)

Sep 2021 – Present, Remote

Insights App

- Developed a digital menu solution for merchants to streamline their menu management process, allowing customers to place orders effortlessly by scanning a QR code or using a link. The application centralises all orders, whether they are placed onsite or online, based on the package the merchant chooses.

- Migrated all the project to **null safety** from edge to edge, addressing and resolved all related issues within a duration of one month.

- Integrated **Firebase** Push Notifications (used to trigger callback to update the ui data by calling **REST API** methods and notify the users with the new orders) this was a solution to replace Firebase **REALTIME** databases.

- Developed a Click & Collect and Delivery Menus Solution using the power of **BloC** state management solution.

- Replaced all material widgets with a **Platform-Oriented** ones to ensure a better native UX.

Receipts App

- A cutting-edge digital receipts solution that enables users to effortlessly link their supported bank accounts to the platform. Once connected, users can seamlessly track and manage their receipts in real-time or manually input them into the application.

- Developed the app **MVP** and release it in just **2 weeks.**

- Developed an interactive and user friendly app using the power and the simplicity of **Riverpod** state management solution.

- Integrated **Deep/ Universal Links** with a strong navigation handling to enable the users linking their bank accounts, receipts or even confirm their email addresses

- Integrated and used **WebSocket AP**I to manage the user data in the app.

Flutter Developer | Co-founder

@Gamyoncu (Turkey)

- Develop an entire Flutter app integrated with Firebase that empowers users to effortlessly discover the best price offers for their cargos. The app allows the users (truck drivers or cargos owners) to efficiently filter through a list of posts, eliminating the need to spend hours searching for the best deal on Facebook private groups.

- Lead the development team to keep develop and test the app functionalities to ensure a better UX.

- Worked directly with a professional Product and UX Designer.

- Improved and reduced **Firebase Read** count from (100K/day) to (6-8K/day) by separate the UI entirely from the Logic side. *daily active users count: 300-380

- Monitor the users using **Firebase Analytics** and **Crashlytics** and use the data to create different campaigns

- Developed a script to automatically fetch the valid posts from Facebook groups then post them to **Firestore** using **JS**, **Regex** and **Google Sheets** .to ensure that most of the users find a good deal.

Education

Ankara University
Bachelor's of Computer Engineering
Oct 2020 – Jun 2024 (Expected)
4th Grade

Skills

Proficiency in

Mobile apps development (Flutter/Dart) • Firebase • State Management • REST API • Web sockets API• 3rd Party integrations • Payment Integrations • Pixel Perfect UI • UX • Testing • CI/CD • Deployment

Familiarity in

Swift • SwiftUI • JavaScript • Figma • Postman

Languages

English – (Advanced)
Turkish – (Bilingual)
Arabic – (Native)
